### PzKpfw VIII Maus – Kubinka Tank Museum (Russia)

The Soviet Commander of Armored and Mechanized troops ordered the hull of V1 to be mated with the turret of V2. The Soviets used six 18t German half-tracks to pull the 55 ton turret off the burnt-out hull. The combined V1 hull/V2 turret vehicle was completed in Germany and sent back to the USSR for further testing. It arrived there on 4 May 1946. When further testing was completed the vehicle was taken over by the Kubinka Tank Museum for storage where it is now on display (Wikipedia)

I'm looking for photos of those tanks :

any Sonderfahrzeuge that I forgot....

This document is a synthesis of photos and information published on the web. I would like to thank the people who took these photos and put them on their websites, or sent them to me, and also those who helped me doing these lists (particularly people of the AFV News Discussion Board).
